

It was a great opportunity provided by COST to learn new work on lipidomic in University of Aveiro under Prof Rosario Domingues and team Tania Melo. Aveiro is a beautiful place to stay with different students from other countries around the world. People in Aveiro and on the campus were really kind and interactive to other students.

It's a beautiful environment on the campus and within Prof Rosarios lab to communicate well and understand thoroughly about the work. I really enjoyed it and learned many new things about lipidomic studies. It was such a pleasure to learn a completely new topic lipidomic under Tania Melo. Prof Rosario and Tania Melo made it feel like a very interesting and easy subject. Thanks to them. I really enjoyed my stay at Aveiro. Looking forward to coming back again.

Regards,

Arun
