

The STSM grant covered a 2-weeks exchange visit in the Functional metabolomics lab led by Daniel Petras at the University of Tübingen (<https://www.functional-metabolomics.com/>). The goal of the stay was to gain expertise in the development of high-throughput bioactivity screening platforms for natural extracts. The STSM was not only a great opportunity to acquire know-how currently lacking in our lab, but also to meet the Petras lab members in person and brainstorm about potential collaborative projects. Following STSM, our labs went for a joint retreat in the Šumava National Park in Czech Republic!
